**English Abstract**

In a method for presenting information from information sources on presentation units (8, 10, 12, 14) transmission of information via the Internet (4) is controlled from an information administrator (6) from a chosen information source to an also chosen, addressable presentation unit for display in accordance with specification from at least one workstation (2). An information system comprises at least one workstation (2) for administrating presentation of information from information sources on presentation units (8, 10, 12, 14). The workstation can be connected to an administrative network site (6) on the Internet (4) to control the transmission of information from a chosen information source, also connectable to the Internet, to at least one chosen, addressable presentation unit, in accordance with specification from the workstation.

**French Abstract**

L'invention concerne un procede permettant de presenter des informations a partir de sources d'information sur des unites de presentation (8,10,12,14), caracterise en ce que la transmission d'informations par l'Internet (4) est commandee depuis un administrateur d'informations (6) a partir d'une source d'informations selectionnee, ladite transmission de donnees s'effectuant vers une unite de presentation adressable egalement selectionnee, prevue a des fins d'affichage selon les specifications provenant d'au moins un poste de travail (2). Un systeme d'information comprend au moins un poste de travail (2) pour administrer la presentation d'informations emanant de sources d'information sur des unites de presentation (8,10,12,14). Le poste de travail peut etre connecte a un site de reseau administratif (6) sur l'Internet (4) afin de controler la transmission d'informations depuis une source d'informations selectionnee, pouvant egalement etre connectee a l'Internet, vers au moins une unite de presentation adressable selectionnee, conformement aux

specifications provenant d'un poste de travail.

**English Abstract**

A system, method and article of manufacture are provided for accessing services within a server without a need for knowledge of an application program interface of the server. A role container is first created. Next, a role class is defined and an attribute for the role class is generated which includes a default start page attribute. In the role container, a role object is made in the role class with the default start page attribute associated therewith. A uniform resource locator is selected for the default start page attribute.

**French Abstract**

L'invention concerne un systeme, un procede et un article de production permettant d'accéder a des services a l'interieur d'un serveur sans avoir necessairement la connaissance d'une interface de programme d'application du serveur. Un contenant de role est tout d'abord cree. Ensuite, une classe de role est definie et un attribut pour la classe de role est produit lequel contient un attribut de page d'ouverture implicite. Dans le contenant de role, un objet de role est produit dans la classe de role avec l'attribut de page d'ouverture implicite lui etant associe. Un localisateur de ressource uniforme est selectionne pour l'attribut de la page d'ouverture implicite.

**English Abstract**

A method and apparatus for managing a web-site. An information definition query is received for defining an integrated view of non-uniform information retrieved from multiple sources across a network, and stored in multiple formats. An integrated view is created according to the information definition query. A site definition query is received for defining a site view for the non-uniform information at the web-site. The site view is created according to the site definition query. The non-uniform information is then presented on the web-site, typically in the form of a HTML document.

**French Abstract**

L'invention concerne un procede et un appareil de gestion d'un site Web. Une requete de definitions d'informations est recue et permet de definir une vue integree d'informations non uniformes recuperees a partir de multiples sources au travers d'un reseau et enregistrees sous de multiples formats. Une vue integree est creee en fonction de la requete de definition d'informations. Une requete de definition de site est recue et permet de definir sur le site Web une vue de site pour les informations non uniformes. La creation du site Web depend de la requete de definition du site. Les informations non uniformes sont alors presentees sur le site Web, d'ordinaire sous la forme d'un document HTLM.
